# SY3002

## Intelligent three-phase wattourmeter calibrator

It can judge three-phase three-wire 192 cases and three-phase four-wire 2304 cases of wiring errors.

It can calibrate the wattourmeter error and constant check, read wattourmeter, and support simultaneous calibration of main and auxiliary meters.

It can analyze power quality, display 50th harmonic and 6 channel waveforms.

It can be used for measurement of electrical parameters such as voltage, current, phase, power, and power factor.

The result can be displayed in arrow diagrams, amplitude, phase, and other modes.

It can record voltage, current, phase, and power factor at specified intervals and plot trend diagram.

With bluetooth and USB interface, it can be connected to Android phones.

The online app allows users to explore more functions.

size: 230mm×125mm×43mm  
weight: 0.5Kg
